Subject: Chloroform, 1,4-Dioxane, Methylene Chloride, or Trichloroethylene Free Statement

To whom it may concern,

We certify that the Hydrochloric Acid products provided by Detrex do not contain Chloroform, 1,4-Dioxane, Methylene Chloride, or Trichloroethylene.

Chlorinated Solvents, such as Chloroform, Methylene Chloride, and Trichloroethylene are a class of organic solvents containing at least one covalently bonded atom of chlorine.

1,4-Dioxane is classified as an ether, and used to stabilize Trichloroethylene.

These products are routinely used in medical and cosmetic products, and when used responsibly are not generally regarded as significant health hazards. However, they can pose a hazard to the environment when not disposed of properly.

Detrex does not use any products such as Chloroform, Dioxane, Methylene Chloride, or Trichloroethylene in the manufacture, storage, or packaging of their Hydrochloric Acid products. While we do not routinely test for these compounds, to the best of our knowledge we have no reason to suspect they may exist in our Hydrochloric Acid Products.

Sincerely,

A blue ink handwritten signature, appearing to read "Jim Vence", is written over the word "Sincerely,".
