Subject: Synthetic Latex Free Statement

To whom it may concern,

Rather than being harvested from rubber trees synthetic latex is produced from petrochemicals. Several types of synthetic latex exist but SBR (styrene-butadiene rubber) is the most common type of synthetic latex used in the production of synthetic latex foam.

To the best of our knowledge synthetic latex is not a material used in the manufacture or packaging of our hydrochloric acid products.

Sincerely,

A handwritten signature in black ink, appearing to read "Jim Vence", with a large, sweeping flourish extending to the left.

Jim Vence
Technical Director
Detrex Chemicals
